

## Rockustic speakers

All products are 100% water- and weatherproof, they will stand as rock to rain, snow and ice.

The speaker elements are made of a fiber- reinforced polymer material, and the drivers are made by the Danish company VIFA.

Available in 70 to 700 watts power handling. Have a slight boost of the higher frequencies, to make for maximal spread of sound for outdoors applications. The interior design is made with no parallel planes to minimize unnatural resonance. Some models have an internal crossover for perfect projection of the treble, middle, and bass frequencies.

All models are available in several colors and textures. Custom designs are made to order.

### Speaker series

ROCK series comes in 13 different models, of varying size and shape. The smallest are made for gardens etc., while the biggest models suits larger parks.

### Subwoofer series

Big, heavy sub-woofers. From 50 to 160 kg, with a power handling from 250 to 700 watts. Available with an internal crossover at 125 Hz

### Omnidirectional series

These speakers are made for a circular, 360 degrees spread of sound. Available in 3 different models. Garden series are available in different designs, some look like ordinary flower pots. You can actually have flowers in these...

### Stonewall series

These speakers can be made to fit into any type of stone wall. They can be made to specification, according to stone samples from the actual wall they are to be mounted into.

All speakers can be fitted with a transformer for 70V line feed, to accommodate for long distances between amplifiers and speaker location.

Instructions for installation and proper care comes with each speaker.

All models can be ordered from Soundscape Studios. Please fill out the contact form for more information and specifications about colours and textures.
